SMARTER LUMBER

MARKET: SUBSTRUCTURE

START OFF ON THE RIGHT FOOTING

Put your project on solid ground with a long-lasting substructure.

Looking to make your deck, boardwalk or walkway last?

Investing in a plastic lumber foundation or substructure by Bedford Technology will not only give your project the structural integrity it needs, but will also help protect it against the elements, so that it lasts or could even outlast the decking boards on top of it.

Finding the right material for your Joist & Stringer and Post & Beam projects can be difficult; traditional wood or concrete can break down over time. However, with Bedford Technology products, you'll be comforted to know that your substructure will last. Fortified with fiberglass strand and/or fiberglass polymer rebar, our structural plastic lumber products will meet your unique project requirements and be the perfect balance between strength and durability, to provide a strong foundation for your substructure applications. Available in a range of size, colors and customizable lengths, we have the solution you've been looking for: an exceptionally long-lasting, maintenance-free, non-leaching and crush-proof answer for your toughest building challenges.

Features:

- Environmentally friendly, won't leach chemicals, and is recyclable
- Resists insects and marine borers
- Won't rot, splinter or degrade
- Maintenance-free, not affected by extreme environments, salt water, acids, chemicals
- Engineering design values & support are available as needed

Products:

Bedford Technology is the leading manufacturer of premium, structural and reinforced plastic lumber for commercial markets, including marine, agriculture, industrial and other outdoor markets. We can't wait to create the next amazing thing you want to do.
