

BUILD TO WITHSTAND THE WRATH.

Plastic lumber is the new more durable and sustainable Vineyard solution

Impervious to rot, insects, moisture and mold, plastic lumber outperforms any other material for a variety of agricultural uses. And unlike PVC or pressure-treated wood, it won't leach any chemicals.

Vineyards worldwide are now benefiting by retrofitting traditional landscaping and architectural wood products with our plastic lumber. Plastic lumber simply lasts longer, holds up to the elements better and looks great. Plus, it's sustainable and environmentally friendly because Bedford Technology products are made of post-consumer recycled plastics like milk jugs.

If trellising is the backbone of your growing operation, this is an upgrade that pays for itself many times over. Our FiberForce® recycled plastic posts and growth stakes change your replacement timeline from months to decades.

Features:

- Won't absorb or leach any substances—ideal for organic systems
- Incredibly strong—bends but doesn't break, even in high winds
- Won't rot, fade or splinter – Resists boring insects
- Low maintenance costs – no painting or staining
- Cuts and drills like wood
- No aging or material breakdown
- Environmentally friendly and sustainable – made from recycled HDPE
- More economical long-term investment—50-year warranty

Products:

Uses:

- Vine stakes and trellis configurations
- Any growing operation that uses stakes
- Fencing in multiple profiles

Bedford Technology is the leading manufacturer of premium, structural and reinforced plastic lumber for commercial markets, including marine, agriculture and industrial and other outdoor markets. We can't wait to create the next amazing thing you want to do.
